

The installation of the City of Marathon central sewer collection system and stormwater improvements are progressing. The following streets have reached a stage of completion where early connections to the sewer system may proceed. It is very important that the plumbers and property owners are aware that they may connect only one end of their on-site sewer laterals. They may connect to the City's cleanout located adjacent to their property line in the City's Right of Way. They can not connect the upper end of the lateral to their active building sewer pipes until after they receive the official Notice of Availability from the City.

The property owners and plumbers should be aware that they must obtain a permit from the City prior to starting the lateral work and must call for the required inspections. They are only allowed to connect to the 6” SDR 26 horizontal lateral pipe located adjacent to the property line. They are not permitted to connect to the vertical 6” cleanout pipe without specific case-by-case approval from the Building Department. They are not permitted to make a new connection to the City’s vacuum pit.

All the vacuum pits and associated 6” gravity piping have been inspected, are verified to be free of rocks or other debris, and have been air pressure tested. When making the connection the City’s lateral, care must be taken to prevent water, rocks, and debris from entering the City’s piping. Care must also be taken to not damage the City’s

infrastructure. If it is necessary to clean or repair the City's piping or vacuum pits as a result of the property owner's lateral connection work, the City may wish to consider holding the property owner responsible for the costs associated with cleaning or repairing the City's infrastructure.
