

Tracking the Tropics

9-22-22 | 2:00pm Tropical Outlook: Satellite wind data and surface observations indicate that an area of low pressure has formed in the southeastern Caribbean Sea, though the associated shower and thunderstorm activity remains disorganized. Any potential impacts to the [#FLKeys](#) will remain highly uncertain until official forecast advisories from the National Hurricane Center begin. Be sure to stay aware of the latest from <http://hurricanes.gov>!
