MEMORANDUM

To: Dan Saus, Utilities Director
From: Ed Castle, P.E.
Date: March 13th, 2025
Re: Fire Detection Project Recommendation of Award

The City of Marathon published a Request for Proposals (RFP) for installation of fire detection equipment to monitor its vacuum pump stations. The work will include installation of detectors, fire alarm control devices and notification devices, including horns and strobes mounted at the entrances to the buildings. The fire alarm control panels will notify a monitoring company of activation of any of the addressable devices. Based on a City-established protocol, the monitoring company will notify Fire Rescue and the City whenever a fire alarm condition is generated, causing dispatch of Fire Rescue services to the location of the alarm. Warning and Supervisory notifications will be transmitted on a non-emergency basis to the City.

The City received two proposals as shown in the tables below. Weiler Engineering reviewed the submittal packages and determined that both proposals met the minimum requirements for responsiveness and responsibility. The City then assigned an evaluation team consisting of three reviewers, who scored the RFP responses in accordance with the requirements of the RFP. The scores were tallied and averaged to determine the final scores for both proposals. As shown in the tables below, IFSS was the highest ranked firm.

Contractor	Price	Score
IFSS	\$98,636.00	50
Hy-Tech Solutions Inc.	\$238,855.25	25

Per the conditions of the RFP, the City entered into negotiations with IFSS, the highest ranked firm. A contract negotiation meeting was held on March 6, 2025, with representatives from the City of Marathon, Weiler Engineering, and IFSS. During this meeting, the scope of work and pricing were reviewed and finalized. Adjustments were made to the Service Area 15 cost to include an AC unit in the fire alarm control panel, and to the monitoring and maintenance fees to ensure compliance with contractual and regulatory requirements. The final agreement includes fire detection and annunciation system installations at Service Areas 3, 4, 5, 6, and 15, as well as annual and semi-annual inspections, calibrations, and maintenance.

The final contract amount is \$98,636.00, as detailed in the updated bid response form. Having successfully negotiated the final scope and pricing, we recommend awarding the contract to IFSS in this amount. This award aligns with the City's procurement process and project objectives.

Based on this comprehensive evaluation, we recommend awarding the Fire Detection for Vacuum Stations Project to IFSS. Their proposal meets all project requirements, and they have demonstrated the capability to deliver the improvements efficiently and in accordance with the established project schedule.
